****TLC LAWN CARE, INC. uses all granular fertilizers****

FUNGUS TREATMENTS

Developing fungus problems depend on the soil composition, temperature and humidity. To be effective, a series of fungicides must be applied in short intervals. Fungicide applications are available at an additional cost. Call us immediately if you suspect lawn fungus.

NUT SEDGE

Nut sedge control is included with a full application program. If you detect Nut sedge in your lawn, please do NOT pull it, it will pop the nuts and spread quickly!

Being on our lawn service does not guarantee a “Picture Perfect” lawn. It requires a joint effort between our customers and us. Timely applications of fertilizers, herbicides, insecticides and (fungicides) are vital. Equally important are the proper practices such as regular mowing at the correct height and with a sharp blade, adequate water at the proper times, lime applications, aerating and reseeding as needed. We at TLC Lawn Care, Inc. would be pleased to work with you to help achieve your lawn’s full potential.
